DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-10, 96 are rejected under 35 U.S.C. 102(e) as being anticipated by Ault et al. (U.S. Patent Number 6,011,978).

Regarding claim 1, Ault et al. discloses essentially all the claimed invention as set forth in the instant application, further Ault et al. discloses a signal transmitting method in a base station (which reads on column 9 lines 24-35), comprising the steps of: transmitting a common channel signal at a first predetermined power level (which reads on column 9 lines 24-35); transmitting a pilot signal at a second predetermined power level, the pilot signal being transmitted at a power level greater than the second predetermined power level for a predetermined time period (which reads on column 9 lines 24-35); and transmitting a data channel signal (which reads on column 4 lines 30-50).

Regarding claim 2, Ault et al. discloses the pilot signal transmitted at the predetermined power level is spread first spreading code, and the pilot signal being transmitted at the higher

power level for the predetermined time period is spread by a second spreading code (which reads on column 9 lines 24-35).

Regarding claim 3, Aultet al. discloses wherein the pilot signal is spread by one spreading (which reads on column 9 lines 24-35).

Regarding claims 4 and 5, Aultet al. discloses wherein the first and second spreading codes are orthogonal codes (which reads on column 9 lines 24-65).

Regarding claim 6, Aultet al. discloses wherein the predetermined time period is located at the boundary of consecutive data frames of the second signal (which reads on column 7 lines 35-36).

Regarding claim 7, Aultet al. discloses wherein the predetermined time period occupies half of said consecutive data frames (which reads on column 9 lines 24-65).

Regarding claim 8, Aultet al. discloses wherein the predetermined time period is set in consideration of propagation environment around the base station, arrangement of base stations, and a signal bandwidth (which reads on column 9 lines 24-35).

Regarding claim 9, Aultet al. discloses wherein the predetermined time period represents a fraction of one data frame (which reads on column 9 lines 24-35).

Regarding claim 10, Aultet al. discloses wherein the higher power level is equal to the overall transmission power of the base station (which reads on column 9 lines 24-35).

Regarding claim 96, Aultet al. discloses wherein the transmission power of one of the common channel signal and the data channel signal is decreased for the predetermined time period (which reads on column 9 lines 24-65).
